TRACKORA

Frontend Architecture & India Localization Recap

Status: Complete • **Market:** India (INR ■, Tamil Nadu, Pondicherry, Karnataka, Maharashtra) • **Server:** http://localhost:5173

1. Executive Summary & India Localization

The **Trackora** ('Every Visit. Every Goal. Every Win.') frontend is fully localized for the Indian enterprise market. All figures are denominated in Indian Rupees (■ Lakhs & Crores), and territories cover Tamil Nadu, Pondicherry, Karnataka, Maharashtra, Telangana, and Delhi NCR. Client presets include prominent retail and corporate enterprises such as **Pothys Retail Flagship (T. Nagar, Chennai)**, **Reliance Retail Corporate**, **Tata Consultancy Services (TCS)**, **Saravana Stores Elite**, **L&T Construction**, and **Infosys Campus**.

2. Delivered Modules & Experiences

Area	Implementation Details	Key Features Built
Trackora Field (Salesperson UX)	Mobile Web View & Phone Simulator *(Home, Visits, New, Leads, Profile)*	• 1-Tap GPS Attendance with accuracy badge (Chennai/Bengaluru/Mumbai). • New Visit logging with Pothys, Reliance, and L&T presets. • Deal sizing in ■ INR with Lakhs/Crores formatting. • Voice memo recording and photo attachment previews. • Indian regional language toggle (Tamil / Hindi). • Offline queue mode with sync status.
Control Center (Manager / Admin)	Executive Web Dashboard *(Search, Timeline, Approvals)*	• Live attendance tracker for Indian sales force (Praveen, Inthiyaz, Rajesh, Priya, Vikram). • Historical date time-travel picker (Today, Yesterday, 21st Oct). • Searchable directory of 100-500 reps with monthly quota %. • Rep day timeline drawer with map route pins, client notes, and voice note player. • 1-Click batch and single approval workflow with required rejection feedback.
Gamification & Notifications	Leaderboard & Live Nudges	• All-India sales leaderboard with milestone bonus unlocks. • 5:30 PM live sales sprint nudge simulation modal. • Dynamic push notification drawer with read states.

3. Technology & Flutter Alignment

As outlined in the *Frontend Development Plan*, the architecture supports both web and native platforms:

- **Web App (Trackora/frontend):** Built with React 19, TypeScript, Vite, Tailwind CSS v4, and Lucide icons. Runs responsive on all viewports.
- **Mobile App Option (Flutter):** Flutter 3.41.7 & Dart 3.11.5 are verified on the system for native Android/iOS deployment.
- **Typed API Contracts:** Defined in src/services/apiContract.ts to ensure swappable backend integration with zero screen rewrites.
- **Local Storage Persistence:** Indian datasets (visits, attendance, leads, quotas) persist across reloads in trackora_*_in_v2.

4. Backend Handoff Endpoints

- **Auth:** POST /auth/login (Salesperson vs Manager JWT)
- **Attendance:** POST /attendance/checkin (lat, lng, device info)
- **Visits:** GET /visits?date=&userId= • POST /visits (idempotencyKey, ■ deal size)
- **Approvals:** PATCH /visits/:id/approve • PATCH /visits/:id/reject (mandatory reason)
- **Leaderboard & Nudges:** GET /leaderboard • Scheduled 17:30 cron for dynamic push nudges
